

## KANSAS AGRICULTURAL STATISTICS SERVICE PROCEDURES AND STAFF

Information is collected in many ways: mail surveys, telephone contacts, personal interviews, and in-the-field observations.

Most estimates are based on probability sample surveys. That is, information collected from a scientifically selected sample of all producers is used to estimate the activities of the entire group. Sampling is not only less costly in time and money than a complete count, but can be more accurate because reporting errors and data-handling errors are minimal compared to those in a complete count or census.

Program content is planned to provide a comparable series of data over time--for example, Kansas wheat and corn production estimates date back to 1866--but also to meet current needs to the extent permitted by available resources. Data user meetings and close contact with farm and industry groups are utilized to maintain the relevance of the data provided.

Kansas Agricultural Statistics Service staff includes highly trained agricultural statisticians with farm backgrounds and extensive experience in Kansas and other states, a support staff of statistical assistants, computer personnel, and printing-mailing specialists. Eddie Wells is the Deputy State Statistician. Lead Statistician for Estimates is David Ranek. Estimate Statisticians include Quentin Wearne, Mike Miller, Sherri Hand, and John Cole. The Survey Statistician is Dan Kolterman, assisted by Research Analyst Dona Ratliff. Ronald A. Sadler, Systems Analyst and Melvin E. Perott, Programmer, are responsible for computer activities, and Dianna Worm is our List Frame Statistician. Candace S. Thomas provides research and editorial assistance, while Judy Allison is our designer and Desktop Publisher. Reproduction and distribution is handled in our printing office by David Judd and Clyde Seel. In addition, a field and telephone staff of part-time enumerators, working under the direction of field supervisors, collect data by personal and telephone interview. The office staff and crew of enumerators join me in thanking the many farmers and agri-business firms who provide the data and assist in planning our program of statistics.

Eldon J. Thiessen  
State Statistician

The photo for the front of this year's Farm Facts Bulletin was provided by Darlene Kirkwood, Telephone Enumerator in our office. This is a photo of her farmstead.

## 2000 AGRICULTURAL HIGHLIGHTS

Cattle producers in Kansas enjoyed a good year. Cattle and calves on farms and ranches were at their highest level since 1974 while cattle prices continued their upward swing, nearing record levels set back in the early 1990's. Production was below recent year's in the four major crops (wheat, corn, sorghum, and soybeans), although soybean producers managed to set another new record in planted acreage. Crop prices were generally mixed, while farmland values continued their upward movement.

Soybean prices for calendar year 2000 were at or above previous year levels except for January and August. Wheat prices were below last year levels for the first four months but started an upward swing in May that continued the rest of 2000. Corn prices were mixed, while sorghum prices were up except for January, February, July, and August. Hay prices were below year-ago levels the first half of the year and rose to as much as \$25 above last year's December price. Cattle prices showed an increase over last year in every month except October where the price was only 80 cents below the year before. However, they still remain slightly below the high level of the early 1990's. Hog prices were above year ago levels in all months; they ranged anywhere from \$3.10 to \$20.70 above the 1999 prices.

Seeding of the 2000 wheat crop started in early September. It progressed rather slowly until scattered showers were received in late September and early October. By the end of October, 97 percent of the acreage was seeded, ahead of the 92 percent seeded for the 1999 crop. Seeding was complete by the middle of November. The percent of the wheat emerged was ahead of last year until the week of November 14 when, at 92 percent emerged, the crop fell behind the 94 percent emergence for last year. Very little precipitation fell during December and most of January, leaving some areas without any measurable precipitation since September. Conditions declined as a result of the dry weather. The crop also lacked a snow cover until the end of January when a winter storm blanketed the fields with 2 to 4 inches of snow. The winter wheat crop broke dormancy in most areas by the end of February. The condition of the crop improved slightly from January. The crop suffered only light freeze and wind damage during the winter. Generally, insect and disease infestations were mostly light throughout the State during the spring. By April 2, 44 percent of the crop was jointed, ahead of the 30 percent jointed at the same time last year. Crop conditions continued to improve during March and April. By May 1, 14 percent of the wheat was headed, ahead of last year's average of 9 percent. The hot, dry weather, with temperatures reaching the 90's and 100's the last week of May, caused the condition to start declining. Eighty-seven percent of the crop was turning color by June 4, compared to 52 percent last year. Harvest began in the south-central part of the State the first week of June. Harvest progressed very rapidly and neared completion the first week of July with 94 percent of the crop harvested, compared with 33 percent last year. The 2000 wheat harvest was complete by mid-July. The protein content averaged 11.9 percent; test weight, 59.9 pounds per bushel; moisture, 11.8 percent.

Corn planting was aided by dry weather in April and was 73 percent complete by May 1, well ahead of the average of 41 percent. By the end of May, planting was complete with corn emerging on 94 percent of the planted acres. Crop condition was reported as mostly good to fair. By the first week of July, 52 percent of the crop was silking, well ahead of the previous year and five-year average. Hot, dry weather throughout August resulted in steadily declining crop conditions and a soil profile severely depleted of moisture. By the end of August, corn condition had declined to a season low of only 45 percent good to excellent, compared to 67 percent good to excellent in early July. The corn crop developed well ahead of average during July and August. As of July 30, silking was nearly complete, compared to the average of 85 percent. Thirty-five percent of the corn crop was mature by late August, compared to the average of only 12 percent. Harvest of corn for grain began in some areas of the state by late August. Warm, dry weather throughout much of September allowed harvest to progress at a rapid pace. By October 1, 88 percent of the crop was harvested, compared to only 33 percent for the five-year average. Harvest was virtually complete by the third week of October.

Planting of sorghum began early and was 9 percent complete by the end of April, which was 8 percentage points ahead of the 5 year average. By the middle of June planting was nearly complete and 72 percent of the crop had emerged. The crop was rated at 64 percent in good to excellent condition at that time. Sorghum condition began to decline as hot, dry weather persisted and by the middle of August only 46 percent of the crop was rated in good to excellent condition. By the first week of September, harvest was well underway with 15 percent of the crop harvested, well ahead of the five year average of 2 percent. Producers had nearly completed harvest by the middle of November.

The soybean crop also started off earlier than normal. Farmers had 11 percent of the acreage planted by April 30 which was 10 percentage points ahead of the five year average. By June 11, 93 percent of the acreage was planted, 88 percent emerged, and 64 percent of the crop was rated in good to excellent condition. However, by the end of the second week of August crop condition started to decline with 59 percent of the crop rated in good to excellent condition. Conditions continued to decline, due to high temperatures and little rainfall, during critical

stages of development. By September 10, farmers had harvested 14 percent of the crop, which was well ahead of the five year average of 1 percent harvested. Harvest was nearly complete by November 26.

Seeding of the 2001 wheat crop started in early September. However, progress was slow as some producers were waiting for rain before planting. By the middle of September only 4 percent of the crop was seeded and top soil moisture supplies for nearly three-fourths of the State were rated very short. Scattered rains were received the last half of September through early October. Dry weather returned by mid-October and seeding had progressed to 69 percent complete with 24 percent of the crop emerged. In late October, rain fell across the State with some areas reporting heavy rains. On November 5, 92 percent of the acreage was seeded and 81 percent of the crop had emerged. Fifty-one percent of the wheat crop was rated in good to excellent condition. Seeding continue during November and by the 26<sup>th</sup>, 98 percent of the acreage was seeded, 92 percent of the crop had emerged, and 55 percent of the crop was rated in the good to excellent conditions.

Wheat production in Kansas was 347.8 million bushels, 20 percent below last year's crop of 432.4 million bushels. The yield, at 37.0 bushels per acre, was down 10 bushels from last year. The acreage harvested for grain, at 9.4 million acres, was up 2 percent from 1999. The preliminary marketing year average price, at \$2.70 per bushel, was up 45 cents from last year and generated a value of production of \$939 million, 3 percent below a year ago. Kansas continues to retain its first place status as the number one wheat state in the nation.

Corn production was 416.0 million bushels, down 1 percent from last year's record of 420.2 million bushels. The yield was estimated at 130.0 bushels per acre, 11 bushels below last year. Acreage harvested for grain, at 3.20 million, was up 7 percent from 1999. This was the eleventh year in a row that corn production exceeded sorghum production. Based on the preliminary 2000 marketing year average price, the value of production for the 2000 corn crop will be \$853 million, 12 percent above the 1999 value.

Sorghum grain production in Kansas was 188.8 million bushels, down 27 percent from last year's crop of 258.4 million bushels. The yield averaged 59.0 bushels per acre, 17 bushels below last year. Harvested acreage for grain, at 3.20 million acres, was 6 percent below 1999. The preliminary 2000 marketing year average price indicates a value of production of \$330.4 million, 14 percent lower than 1999. Kansas retained its title as the number one sorghum grain and sorghum silage producing state.

Soybean production in Kansas was 50.0 million bushels, down 38 percent from last year and the lowest since 1995. Yield, at 20.0 bushels per acre, was down 9 bushels from last year. Acres harvested was 2.50 million acres, down 300,000 acres from last year's record of 2.80 million acres. Planted acreage set another new record of 2.95 million acres, 100,000 acres above last year's record of 2.85 million acres. Based on the preliminary marketing year average price, the value of production for the 2000 crop will be \$237.5 million, 35 percent below 1999.

All hay production totaled 6.54 million tons, down 13 percent from 1999. Acres harvested, at 2.80 million acres, was up 2 percent from last year. The all hay preliminary marketing year average price was \$78.50 per ton, producing a farm value of \$474.2 million, up 5 percent from 1999. Grazing and stock water supplies ran low the latter half of 2000.

All cattle and calves on Kansas farms and ranches on January 1, 2001 totaled 6.70 million head, up 2 percent from January 1, 2000 but down 4 percent from the record set in 1974 of 6.99 million head. This is only the fourth time on record that all cattle and calves has reached 6.70 million head or more. The 5.8 million head of cattle marketed during 2000 was up 1 percent from last year. Fed cattle marketings in 2000 were 5.4 million head, up 3 percent from the previous year. Monthly beef cattle prices were above 1999 except for October. Cash receipts from the sale of cattle were \$4.95 billion, up 9 percent from 1999.

The December 1, 2000 hog inventory in Kansas was 1.52 million head, 4 percent above the previous year and falling back in line with the numbers experienced in 1996, 1997, and 1998. Total cash receipts from hogs were \$295.4 million, up 33 percent from 1999.

### FLOUR AND MILL FEED PRODUCTION, 1992-2000

Year	Number of Plants	Wheat Ground	Flour Produced		Mill Feed Produced	
			Quantity	Value	Quantity	Value
		(000 Bu.)	(000 Sacks)	(\$000)	(Tons)	(\$000)
1992	18	89,301	39,590	395,504	716,579	51,235
1993	18	91,498	40,654	413,858	731,772	51,663
1994	18	93,955	42,698	445,340	781,373	59,931
1995	19	91,226	40,082	478,980	737,509	56,419
1996	19	83,538	37,600	484,288	665,520	79,330
1997	18	85,809	39,175	417,997	665,975	56,874
1998	18	88,831	40,278	379,016	700,837	45,765
1999	18	93,728	42,840	379,991	732,564	40,511
2000 1/	18	94,632	42,047	383,048	735,823	40,029

1/ Preliminary.

### SOYBEAN OIL AND MEAL PRODUCTION, 1992-2000 1/

Year	Number of Plants	(000 Lbs.)	Soybean Oil	Soybean Meal	Combined Value
			(Tons)	(Tons)	(\$000)
1992	4	593,873	1,254,895		349,394
1993	4	594,594	1,261,592		385,186
1994	4	585,568	1,252,780		391,367
1995	4	684,252	1,447,213		435,421
1996	5	626,128	1,323,166		474,173
1997	4	743,137	1,498,078		568,878
1998	4	771,532	1,654,599		468,738
1999	5	397,394	949,253		203,974
2000	3	356,067	760,751		186,295

1/ There are five oilseed processors in Kansas. Only three are included here, as we were unable to get permission to report results from all five processors.

### COMMERCIAL FEEDS, 1992-2000 1/

Year	Number of Feed Manufacturers Registered	Commercial Feeds Sold 2/		Customer Formula Feeds	Total Commercial and Customer Formula Feeds
		Quantity	Value		
		(000 Tons)	(\$000)	(000 Tons)	(000 Tons)
1992	825	2,677	599,648	812	3,489
1993	882	2,671	622,343	787	3,458
1994	1,073	2,787	666,093	747	3,534
1995	866	2,568	577,800	871	3,439
1996	837	2,296	626,808	668	2,964
1997	839	2,186	629,568	748	2,934
1998	826	2,452	642,424	840	3,292
1999	801	3,166	725,014	956	4,122
2000	779	3,399	795,366	940	4,339

1/ Not an enumeration. Data based on voluntary reporting. 2/ Commercial feeds include manufactured formula feeds and feed ingredients.

### TOTAL FERTILIZER SOLD IN KANSAS, 1978-2000

Fiscal Year (July 1-June 30)	Fall	Spring	Total	Fiscal Year (July 1-June 30)	Fall	Spring	Total
